

The UNF **Lean Six Sigma** programs are designed for both manufacturing and service organizations.

In becoming Lean Six Sigma Green Belts, attendees will learn how to contribute to and even lead Lean Six Sigma improvement teams. Participants will gain a strong knowledge of how to apply the Lean Six Sigma methodology to the improvement of processes, enabling cost reductions and improvements in productivity, quality and customer satisfaction. Participants receive 10 days of intensive, workshop-focused instruction. Those achieving Green Belt status often later progress to Black Belt status by taking the Lean Six Sigma Green Belt to Black Belt transition course.

Who Should Attend:

Individuals in service organizations or manufacturing companies who wish to utilize Lean Six Sigma Green Belt tools to drive cost reductions and improvements in quality, productivity and customer satisfaction.
